

Any Document, From Any System, eSigned.

TotaleAtlas - Ready-to-Sign Edition

Advanced eSignature and Document Presentment Platform

IMM is pleased to introduce the next generation of our popular eSignature and document presentment solution that can accept virtually any document from any source, prepare it for eSignature, and then archive it safely and seamlessly into your Imaging/ECM system. TotaleAtlas is also available with an optional workflow automation module that further streamlines and controls your eSignature and document processes. Adding TotaleAtlas Workflow helps insure that your financial institution's established policies and regulations are followed and not bypassed or subjected to potential employee error.

TotaleAtlas is an integrated electronic document presentment and eSignature platform that seamlessly integrates "out of the box" with virtually any business or desktop application. Electronic documents that need to be eSigned in order to complete critical business transactions are easily transferred to TotaleAtlas. A flexible array of eSignature options are provided that allow documents to be eSigned in-person and/or remotely. Once documents have been eSigned and finalized, the completed secure PDFs (documents) along with their required index values are seamlessly archived into your imaging/ECM system. With TotaleAtlas, the entire document collection, preparation, eSignature and archival process is 100% electronic. Traditional paper-based processes, as well as the cumbersome tasks of scanning, indexing or filing documents into your imaging/ECM system are eliminated.

TotaleAtlas is newly updated with IMM's advanced document metaphrastic technology which allows us to accept and process virtually any document format from any system for eSignature - no matter how specialized or proprietary the format.

TotaleAtlas delivers its powerful capabilities to your employees in a newly enhanced, dynamic user interface. This intuitive user experience takes the rich features and functionality provided by TotaleAtlas and presents them in an easy-to-navigate, browser-based user experience.

TotaleAtlas installations can be extended with an optional add-on module, TotaleAtlas Workflow. This module allows financial institutions to automate and control key business processes and tasks to occur in accordance with established business policies and regulations. Not only are efficiencies and increased productivity gained by leveraging workflow, compliance and governance is enhanced by ensuring that tasks occur as required by regulations and established policies.

"With TotaleAtlas, the other lenders cannot undercut our financing because of the speed and convenience we can now offer; and our courier costs have dropped by almost 66%"

Bill Newman
Chief Information Officer
Service Credit Union

Powerful Multi-Channel eSignature Capabilities

TotaleAtlas provides your document signers with multiple methods to sign and execute their business documents - at their convenience and from virtually any device. Options include traditional in-person signing via signature pads or Apple's popular iPad® (IMM iSign App), as well as remote signing via our secure cloud-based service called Document Exchange. Unique to TotaleAtlas is the ability to blend signature methods (in-person and/or remote signatures) when multiple signers are required on a single business transaction - providing the ultimate in consumer convenience.

The "I" in IMM Stands for Integration

IMM brings unique value to Financial Institutions with our application integration services that surround and complete the TotaleAtlas platform. The value begins with the simplicity of our "out-of-the-box" integration that allows virtually any document to be easily transferred to a TotaleAtlas session for eSignature processing. IMM has also established strategic partnerships with many core, deposit and loan platform vendors. These partnerships have allowed us to develop specialized web services integrations that further simplify and streamline the initialization process between your business application and TotaleAtlas. Finally, our flexible archival integration enables TotaleAtlas to seamlessly transfer completed documents into your document imaging system, eliminating any manual processes such as document scanning or document indexing.

The Innovative Value of TotaleAtlas

- Paperless transaction from document collection, to eSignature, to document archival
- Uniform collection and presentment of all business transaction documents from a variety of sources
- Fill-from-screen allows for data field additions to be made to the original document
- Blended, multi-channel eSignature options for signer convenience
- Optional workflow automation module keeps transactions moving smoothly and in accordance with your business policies
